

MUHAMMAD RIZWAN

Full-Stack Software Engineer (MERN Stack)

Lahore, Pakistan | +92 316 4049722 | muhammadrizwanramzan300@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer (MERN) with hands-on experience architecting and deploying production SaaS platforms, payment-integrated systems, and real-time applications. Skilled across the full delivery lifecycle — from React/Redux front ends to Node/Express APIs, database design, and AWS/Docker-based deployment — with a track record of measurable efficiency and accuracy gains across multiple live, client-facing products.

CORE SKILLS

Frontend	React.js, Redux, Tailwind CSS, Bootstrap 5, Material UI, HTML/CSS
Backend	Node.js, Express.js, REST APIs, Webhooks, Socket.io, JWT Authentication
Database	MongoDB, PostgreSQL, Prisma ORM
DevOps & Cloud	AWS (EC2/S3), Docker, Vercel, VPS Hosting, Nginx, Linux (Ubuntu), GitHub Actions, CI/CD
Payments & Integrations	Stripe, Razorpay, Google Wallet API, Apple Wallet API, WhatsApp Cloud API
Tools & Practice	Git, Postman, Swagger, Unit Testing, Agile/Scrum

PROFESSIONAL EXPERIENCE

Associate Software Engineer | Byte Craft

January 2024 – Present

- Architected and deployed full-stack MERN applications, delivering responsive, high-performance solutions across multiple production environments.
- Engineered RESTful API and Webhook integrations with third-party services (including WhatsApp), enabling real-time communication and workflow automation.
- Built dynamic, cross-device UIs by leveraging React.js, Redux, Tailwind CSS, and Bootstrap 5, ensuring consistent user experience across platforms.
- Managed end-to-end deployment infrastructure across Vercel, Linux/Ubuntu VPS, and AWS, handling hosting environments and domain configuration.
- Maintained code quality and delivery velocity by using Git for version control, executing unit tests, and collaborating within Agile sprint cycles.

Project: Verisaya — Multi-Tenant SaaS Platform | [verisaya.com](#)

- Architected a multi-tenant SaaS platform with role-based access control (Super Admin, Admin, Coordinator, Trainer, Employee) and isolated organizational workspaces, enabling secure multi-organization subscription management.
- Built a QR code-based attendance system with secure check-in/check-out workflows and automated duration calculations, delivering advanced analytics across attendance, trainer performance, and department-level reporting.
- Developed an end-to-end training management module, enabling Admins and Coordinators to create sessions, assign trainers, and enforce department- and role-based access restrictions.
- Streamlined onboarding by building bulk-import functionality for employees and coordinators, integrated with automated email workflows and temporary password generation.
- Established CI/CD pipelines using GitHub Actions and managed full platform infrastructure on AWS, ensuring reliable, scalable delivery.

Project: Scrum Coffee Shop — Management & Loyalty Platform

- Developed a full-stack Coffee Shop Management System supporting 100+ users, featuring JWT-based authentication, single-device login enforcement, and a dynamic billing engine for cash/card payments with automated discounts and promotions.
- Integrated Google Wallet and Apple Wallet APIs to enable instant QR-based loyalty/subscription card issuance, with real-time synchronization of loyalty points, order updates, and subscription status across web and mobile.
- Built a QR code-based barista workflow for instant reward scanning at checkout, improving checkout efficiency by ~40%.
- Designed a tiered loyalty and rewards program (VIP/frequent customer tiers) with a structured reward-distribution engine driving customer engagement.
- Implemented an automated notification system delivering targeted daily promotions, event-based discounts, and personalized birthday rewards to drive retention.

Project: GenCyb — Cybersecurity Compliance Platform | app.gen-cyb.com

- Developed an enterprise-grade cybersecurity compliance platform supporting 1,000+ users across multiple organizations, built on a scalable Docker-based architecture using Node.js, Express.js, PostgreSQL, and Prisma ORM.
- Implemented secure authentication and authorization, including JWT with refresh-token rotation, Email/SMS-based Multi-Factor Authentication, and Role-Based Access Control across 50+ RESTful APIs.
- Designed and optimized a normalized PostgreSQL schema and documented APIs via Swagger, ensuring standardized responses and efficient query performance.
- Integrated real-time collaboration using Socket.io alongside Stripe for subscription/payment processing and automated email/SMS notifications.

Project: Vehicle Complaint – Scan2Alert | <https://scan2alert.in/>

- Designed and deployed a WhatsApp-based platform enabling vehicle registration, complaint submission, and secure in-chat payments via Razorpay.
- Integrated the Razorpay Payment Links API with WhatsApp Cloud API to process payments directly in chat with real-time payment-status tracking.
- Automated vehicle-data verification and complaint logging (issue + location), instantly notifying both vehicle owners and complainants.
- Leveraged MongoDB for real-time data storage and retrieval, ensuring high performance and reliability at scale.
- Configured WhatsApp Webhooks for seamless two-way communication and instant data synchronization.
- Deployed on a Linux VPS using Nginx and SSL with a custom domain for secure, production-ready hosting.

Associate Software Engineer | SL2 Studio

August 2023 – January 2024

- Developed and deployed full-stack MERN applications (MongoDB, Express.js, React.js, Node.js), delivering robust and scalable solutions.
- Designed and integrated RESTful APIs and Webhooks to enable real-time data flow and third-party communication, including WhatsApp integration.
- Created responsive, dynamic front-end interfaces using React.js, Redux, Tailwind CSS, and Bootstrap 5 for optimal cross-device UX.
- Managed deployments across Vercel, Linux/Ubuntu VPS, and AWS, ensuring efficient CI/CD, domain configuration, and server setup.
- Used Git for version control, performed unit testing, and collaborated in Agile teams to streamline development.

Project: UME Health | <https://ume-health.vercel.app/>

- Designed and implemented a secure registration system with email verification and automated notifications.
- Integrated a PDF-generation module for referral file distribution, enhancing workflow efficiency by 40%.
- Developed an admin panel for streamlined appointment scheduling, improving scheduling accuracy by 30%.

Project: Moving House — Home-Shift Pro | <https://moving-house.vercel.app/>

- Served as Tech Coordinator, enhancing user experience by integrating state-code input for more efficient cleaning and moving service matching.
- Implemented secure email verification, improving registration accuracy by 30% and reducing processing time by 20%.

EDUCATION

Bachelor of Science in Computer Science

National College of Business Administration & Economics, Lahore | CGPA: 3.2 | 2020 – 2024

CERTIFICATIONS

- Developing Back-End Apps with Node.js and Express — IBM (Coursera)
- Building a Blog using MERN Stack — Udemy
- Mastering Loops: Modern JavaScript Techniques — Udemy
- Docker Certified Associate (DCA) — Coursera
- Agile AWS Academy Cloud Architecting — Credly
